Instructions For Wire Harness Repair Checksheet

To help the factory identify and correct an electrical wire harness connector problem, complete the information requested on the form:

- Use the Electrical Troubleshooting Manual (ETM) to obtain the coupler color and number, the wire color, and the pin location within the coupler.
- Indicate the supplier/manufacturer of the wire harness. The part number tag will have a supplier's symbol, for example, a clover leaf or an arrow.
- Report the "country of origin." The part number tag will state "Made in USA" or "Made in Mexico." If blank, then it was made in Japan.
- A red dot indicates the continuity was checked; if the wire harness was previously repaired, it will have a second red dot signifying a second continuity check. Also, the initials of the repair person should be on the back of the tag.
- Circle the type of problem found with the harness.
- Write a description of the exact location and the specific problem.
